

# Hosted Payment Gateway

Fusebox helps businesses like yours reduce the complexity of navigating their payment-processing environment(s), stay compliant, and minimize chargeback and downgrade liability. Offering the latest secure payment technology along with advanced payment controls, our gateway connects you with the features needed to run the payment side of your business more efficiently.

## SECURITY & STABILITY DELIVERS PEACE OF MIND

As a global leader in payments, security and reliability are at the forefront of everything we do. Fusebox is a fully certified PCI-DSS hosted gateway solution. Sensitive cardholder data is transmitted securely from your business location(s) to our hosted platform within one of our secure data center environments – mitigating risk and reducing associated PCI liability.

- Through Fusebox, our Simplify® solution integrates EMV with your POS/PMS while and delivering encryption and tokenization to isolate sensitive card data from your POS/PMS – reducing the scope of PCI-DSS compliance.
- Fusebox incorporates the latest data security protections and exceeds the most stringent PCI and PA-DSS requirements and industry compliance standards.
- Fusebox leverages a proven and reliable Stratus System platform for fault tolerant computing that delivers maximum uptime.

## FUSEBOX DELIVERS PAYMENTS

As a secure, flexible hosted payment gateway, Fusebox makes it easy to stay ahead of your payment needs. Our gateway solution provides a single interface for delivering payments securely across your business locations, to your choice of processor(s). Through our intuitive web-based interface, batch management and reporting features keep real-time transactional data at your fingertips – anytime, anywhere.

**LET'S TALK:**

## Secure Payment Connections with Purpose

### THE RIGHT CONNECTIONS FOR YOU

The way you accept payments may vary greatly depending on business model(s) operated within your organization. Fusebox reduces the complexities by providing one-to-many connectivity, consolidating payments from various systems across your organization, and securely delivering them to your choice of certified banks/processors.

Through simple APIs, Fusebox seamlessly integrates with leading value-added resellers and software providers supporting a variety of POS/PMS platforms. Fusebox also streamlines processor certifications allowing you to certify to our hosted gateway – not to each processor individually – minimizing the time and expense associated with adding new POS/PMS systems or endpoints. You can choose from connectivity options right for your business, including TLS, MPLS, VPN, and dial.

### FUSEBOX IS BUILT ON A FOUNDATION OF SIX KEY ELEMENTS

**Security.** The hosted environment ensures that cardholder data is stored behind our firewall, protecting you and your customers.

**Stability.** The core platform is built on proven, dependable and redundant switch technology that delivers maximum uptime.

**Connectivity.** Interfaces to a vast array of POS/PMS providers and certified transaction processors provide the freedom of choice.

**Flexibility.** Payment types, communication methods, processing rules and user rights are mapped to the unique needs of your business.

**Visibility.** Batch management and reporting are accessed through an web-based portal, providing a real-time view into the transaction lifecycle.

**Simplicity.** It's easy to add new locations, implement system upgrades and maintain version control across your enterprise.
